

In case of technical questions, please contact our sound engineer:

Pavel Cupák, +420 608 150 434, p.cupak@seznam.cz

1. Stage

Stable, appropriately elevated for the venue. Club stages: minimum 6x4 meters, no risers required.

Festival stages: two 0.4m high, 2x2m risers at the back sides.

2. Power Supply

In perfect condition. Preferably separate sources for stage and FOH.

Use SCHUKO (Czech or German) sockets with circuit protection.

3. Sound System

Professional PA (e.g., Adamson, d&b audiotechnik, EAW, L-Acoustics) with proper sub-bass.

Must deliver 115 dB(A) peak at FOH without distortion.

Band brings its own Allen & Heath SQ/Avantis mixing console.

Require 2x CAT5/6/7 between FOH and stage.

4. Monitors

The band brings its own in-ear monitoring system. It is good to have 1-2 monitors as backups.

For passive monitors: inputs should be located at the same place as the PA and CAT terminations.

5. Frontfill

Essential for audience in front rows. We can integrate and process it ourselves.

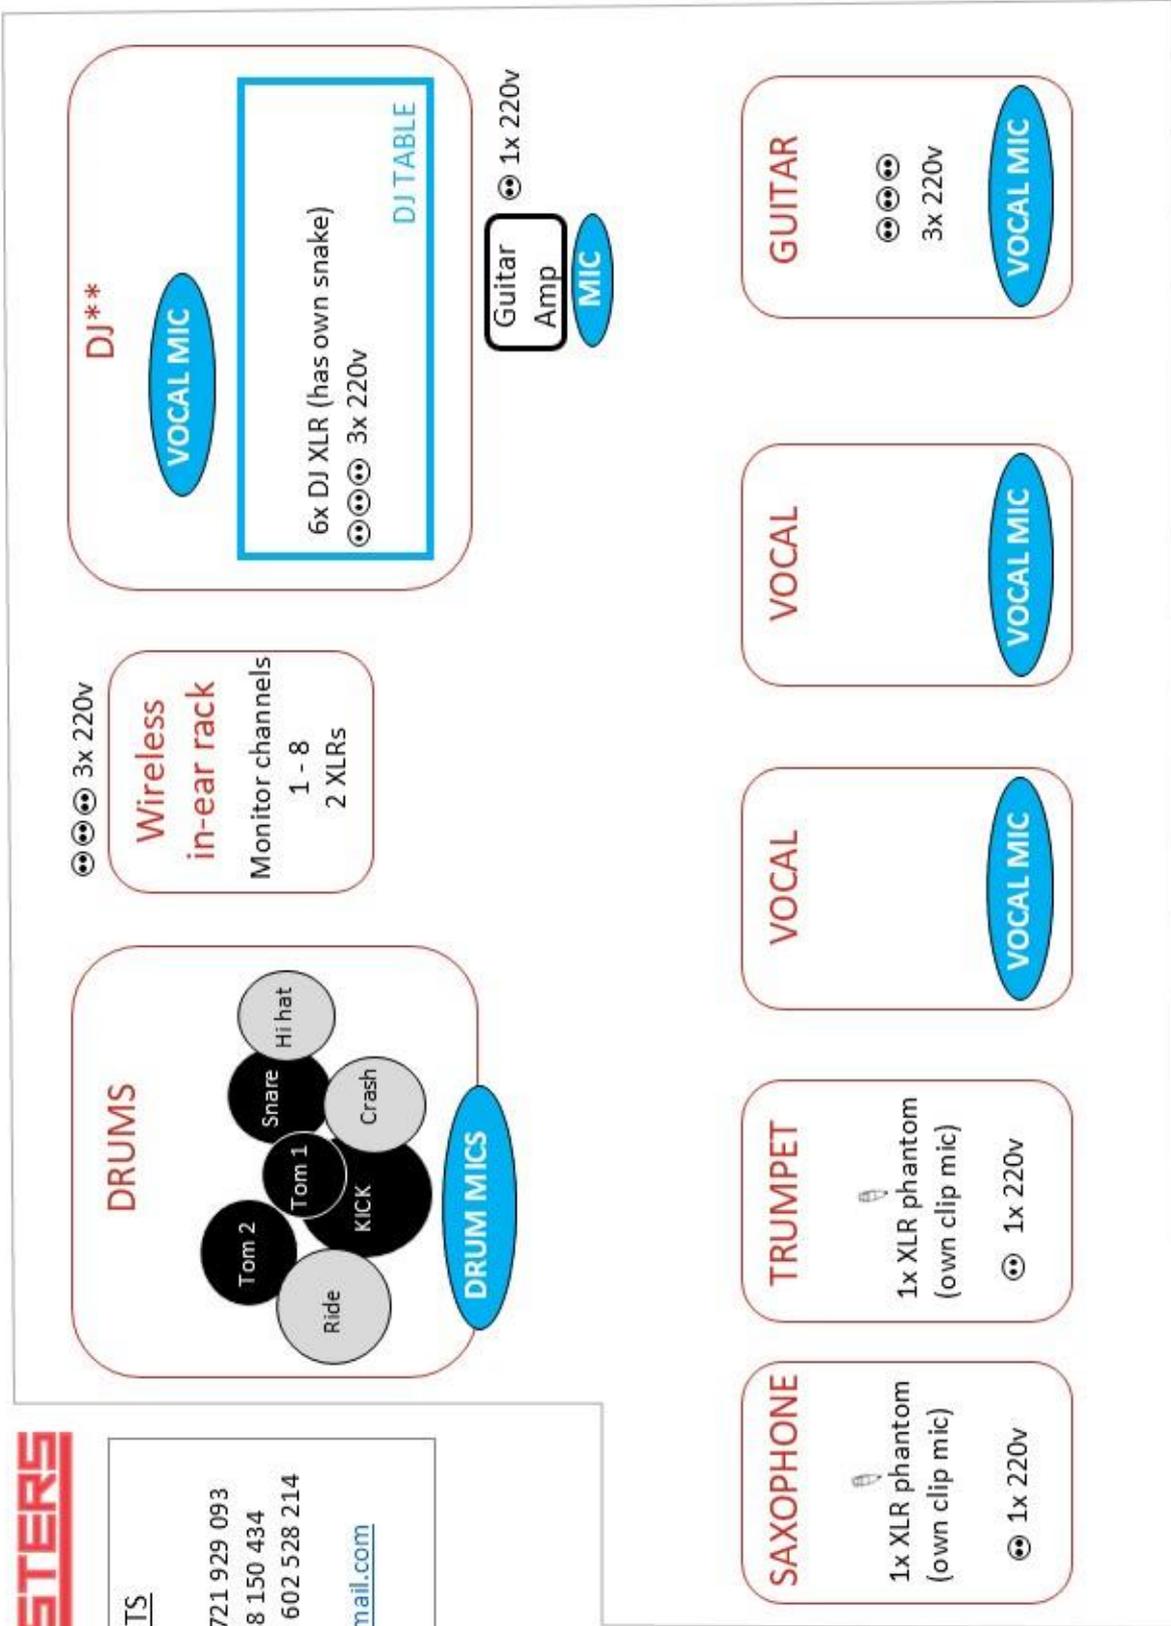

6. Lighting

No lighting engineer travels with the band. Standard club lighting is sufficient.

Prefer hazer over traditional fog machine.

This technical rider is an integral part of the contract and failure to comply may result in cancellation of the performance. Thank you for your understanding!
